

GymPro — Postman Testing Guide

Phase 3: Test with Postman | Phase 4: All API Endpoints

Base URL for ALL requests: `http://localhost:8080`

Phase 3

Test with Postman — step by step

i How Postman talks to GymPro

Every request goes to **localhost:8080** (gateway). The gateway checks your JWT token, then routes to the right service automatically. You never call ports 8081–8087 directly.

```
Postman → localhost:8080/auth/login ↓ gateway validates JWT ↓ routes to
auth-service:8081 ↓ returns response back to Postman
```

1 Register a user (no token needed)

Method: POST **URL:** `http://localhost:8080/auth/register`

Headers:

```
Content-Type: application/json
```

Body (raw JSON):

```
{ "name": "Shreyas V", "email": "shreyas@gympro.com", "password":
"admin123", "role": "MEMBER" }
```

Expected response:

```
{ "token": "eyJhbGciOiJIUzI1NiJ9...", "email": "shreyas@gympro.com",
"role": "MEMBER", "message": "Registered successfully" }
```

Tip: Copy the token value — you need it for ALL other requests.

2 Login and get your JWT token

Method: POST **URL:** `http://localhost:8080/auth/login`

Body (raw JSON):

```
{ "email": "admin@gympro.com", "password": "admin123" }
```

Response — save this token:

```
{ "token": "eyJhbGciOiJIUzI1NiJ9...", "email": "admin@gympro.com", "role":
"ADMIN", "message": "Login successful" }
```

In Postman: go to the **Authorization** tab → Type: **Bearer Token** → paste your token. All requests in this collection will use it automatically.

3 Create a member profile (logged in as ADMIN)

Method: POST **URL:** http://localhost:8080/members

Headers:

```
Authorization: Bearer Content-Type: application/json
```

Body:

```
{ "name": "Shreyas V", "email": "shreyas@gympro.com", "phone":  
"9876543210", "address": "Mysuru, Karnataka", "gender": "Male" }
```

4 Add a trainer (ADMIN only)

Method: POST **URL:** http://localhost:8080/trainers

Body:

```
{ "name": "Ravi Trainer", "email": "ravi@gympro.com", "phone":  
"9000000001", "specialization": "Weight Loss", "experienceYears": 5 }
```

5 Add trainer schedule (login as TRAINER role)

First login as **ravi@gympro.com** to get a TRAINER token, then:

Method: POST **URL:** http://localhost:8080/trainers/schedule

Body:

```
{ "trainerId": 1, "dayOfWeek": "MON", "startTime": "09:00", "endTime":  
"11:00" }
```

6 Subscribe to a membership plan (MEMBER)

First see available plans:

Method: GET **URL:** http://localhost:8080/plans

Then subscribe:

```
POST http://localhost:8080/plans/subscribe  
?memberId=1&memberEmail;=shreyas@gympro.com&planId;=1 No body needed –  
params are in the URL
```

7 Book a trainer session (MEMBER)

Method: POST **URL:** http://localhost:8080/bookings/create

Body:

```
{ "memberId": 1, "memberEmail": "shreyas@gympro.com", "trainerId": 1,  
"trainerEmail": "ravi@gympro.com", "scheduleId": 1, "sessionDay": "MON",  
"sessionTime": "09:00 - 11:00", "notes": "Focus on upper body" }
```

Tip: This also sends email notifications automatically if Gmail is configured in notification-service.

8 Make a payment

Method: POST **URL:** http://localhost:8080/payments/pay

Body:

```
{ "memberId": 1, "memberEmail": "shreyas@gympro.com", "bookingId": 1,
  "amount": 999.00, "paymentMethod": "UPI", "description": "Session with Ravi
  - MON 09:00" }
```

Accepted payment methods:

CREDIT_CARD | DEBIT_CARD | UPI | QR_CODE | CASH

Tip: Response includes a transactionId like TXN-A1B2C3D4 and sends a receipt email.

Tip

Common errors and what they mean

401 Unauthorized — Token missing or expired. Login again and copy the new token. **403 Forbidden** — Wrong role. e.g. MEMBER trying an ADMIN-only endpoint. **404 Not Found** — Wrong URL or the ID doesn't exist in the database. **500 Server Error** — Check Eclipse console for the red stack trace. **Connection refused** — That service is not running. Check Eclipse.

Phase 4

Quick reference — all API endpoints

All requests go to **http://localhost:8080**. Set **Authorization: Bearer <token>** header on every request except /auth/register and /auth/login.

Auth service — /auth/**

POST	/auth/register	Register new user (no token needed)
POST	/auth/login	Login and get JWT token (no token needed)
GET	/auth/test	Check service is running

Member service — /members/**

POST	/members	Create member profile
GET	/members	Get all members (ADMIN only)
GET	/members/{id}	Get one member by ID
PUT	/members/{id}	Update member profile
TE	/members/{id}	Deactivate member (ADMIN only)
GET	/members/test	Health check

Trainer service — /trainers/**

POST	/trainers	Add trainer (ADMIN only)
------	-----------	--------------------------

GET	/trainers	Get all trainers
GET	/trainers/{id}	Get one trainer
GET	/trainers/specialization/{spec}	Filter by specialization
PUT	/trainers/{id}	Update trainer
TE	/trainers/{id}	Deactivate trainer (ADMIN)
POST	/trainers/schedule	Add schedule slot (TRAINER/ADMIN)
GET	/trainers/{id}/schedule	Get all slots for trainer
GET	/trainers/{id}/available-slots	Get only open slots
PUT	/trainers/schedule/{scheduleId}/book	Mark slot as booked

Plan service — /plans/**

POST	/plans	Create plan (ADMIN only)
GET	/plans	Get all active plans
GET	/plans/{id}	Get one plan
PUT	/plans/{id}	Update plan (ADMIN only)
TE	/plans/{id}	Deactivate plan (ADMIN only)
POST	/plans/subscribe	Subscribe to plan (params: memberId, memberEmail, planId)
GET	/plans/my/{memberId}	Get my subscriptions
TE	/plans/subscription/{subId}	Cancel subscription

Booking service — /bookings/**

POST	/bookings/create	Book a trainer session (MEMBER)
GET	/bookings/{id}	Get one booking by ID
GET	/bookings/member/{memberId}	All bookings for a member
GET	/bookings/trainer/{trainerId}	All bookings for a trainer
POST	/bookings/cancel/{id}	Cancel a booking
POST	/bookings/complete/{id}	Mark as completed (TRAINER/ADMIN)

Payment service — /payments/**

POST	/payments/pay	Make a payment (MEMBER)
GET	/payments/my/{memberId}	My payment history
GET	/payments/{id}	Get one payment by ID
GET	/payments/txn/{txnId}	Get payment by transaction ID
GET	/payments/booking/{bookingId}	Get payment linked to a booking
POST	/payments/refund/{id}	Refund a payment (ADMIN only)

GET	/payments/all	All payments (ADMIN only)
Notification service — /notify/**		
POST	/notify/send	Send email (params: email, subject, message)
GET	/notify/test	Health check

Ref

Pre-seeded test accounts (password: admin123)

Email	Role	Use for
admin@gympro.com	ADMIN	Full access — create plans, view all data, re
ravi@gympro.com	TRAINER	Add schedules, view bookings, mark session
shreyas@gympro.com	MEMBER	Browse plans, book sessions, make paymer

Tip: To switch roles in Postman: click Send on POST /auth/login with the email of the role you want, copy the new token, update Authorization → Bearer Token. One login per role.
